

HTC FH Turnstile

Full height turnstiles are a brilliant perimeter security product for controlling pedestrians on and off site. How they work is, after authorizing a person (via access control or push button) the solenoid lock in the head releases and allows one rotation to get one person through. Tailgating is near impossible as the 3 wing rotor comfortably fits one person.

They are designed to be fixed down to a concrete foundation, cast in level with the FFL. We can supply them in either galvanised finish or galvanised and powder coated. For special applications a stainless steel option is available. All our turnstiles can be manually overridden, and can be programmed to enable free rotation on a power failure.

Special brackets are mounted on the frame to suit the wide range of access control devices available, for both entry and exit.

Technical Specification

Power Supply	240v single phase, 110v version available
Flow Rate	Up to 22 people per minute
Fire Input	Can be programmed to free rotate one way
Finish	Hot dipped galvanised and powder coated as an option
Colour	Any Ral colour
Override	Key override on power failure
Warranty	12 months parts and labour, 5 year parts warranty

Options and Accessories

- Walkway Canopies can be fitted to help shelter users from the elements
- LED Red and Green indicators can be installed to help guide users through the turnstile
- Remote long range radio systems for security kiosks
- Voice and video intercom systems (GSM, WIFI, WIRED or IP)
- Side DDA gate with closer and maglocks, see our DDA gate range
- Central rotor can be a different colour if required
- Lights can be fitted underneath the canopy operated via daylight sensor or PIR

Hi-Tec Controls (Bolton) Ltd reserves the right to alter specifications from those detailed above without notice. Exact specifications for individual contracts can differ from those shown here and are provided in detailed quotations.
